Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-08-559-524A-4
Sequence 4, Application US/08559524A
Patent No. 5871963
GENERAL INFORMATION:
APPLICANT: Conley, Pamela B.
APPLICANT: Conley, Pamela B.
APPLICANT: Jantzen, Hans-Michael
TITLE OF INVENTION: NOVEL PURINERGIC RECEPTOR
NUMBER OF SEQUENCES: 14
CORRESPONDENCE ADDRESS:

Submitted (APR-2000) to the EMBL/GenBank/DDBJ databases.

-!-FUNCTION: Receptor for cysteinyl leukotrienes. The response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system. Stimulation by BAY u9773, a partial agonist, induces specific contractions of pulmonary veins and might also have an indirect role in the relaxation of the pulmonary vascular endothelium. The rank order of affinities for the leukotrienes is InC4 = LTD4 >> LTD4.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- TISSUE SPECIFICITY: Widely expressed, with highest levels in the heart, placenta, spleen, peripheral blood leukocytes and adrenal gland. In lung, expressed in the interstitial macrophages, and slightly in smooth muscle cells.

-!- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
Submitted (SEP-2003) to the EMBL/GenBank/DDBJ databases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GO; GO:0004974; F:leukotriene receptor activity; NAS.             mitted (bEC-2000) to the EMBL/GenBank/DDBJ databases.
FUNCTION: Receptor for cysteinyl leukotrienes. The response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system (By similarity).
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (Potential).

- I. PUNCTION: Receptor for cysteinyl leukotrises. The response is
mediated via a G-protein that activates a phosphatidylinositol-
calcium second messenger system. The rank order of affinities for
the leukotrienes is LTC4 = LTD4.

- SUBCELLULAR LOCATION: Integral membrane protein.

- IISSUE SPECIFICITY: Widely expressed at low levels, with highest
expression in the spleen, thymus and adrenal gland, and lower in
the kidney, brain and peripheral blood leukocytes.

- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.

Submitted (DEC-2000) to the EMBL/GenBank/DDBJ databases.
-1-FUNCTION: Receptor for cysteinyl leukotrienes mediating
constriction of the microvascular smooth muscle during an
inflammatory response. This response is mediated via a G-protein
that activates a phosphatidylinositol-calcium second messenger
system (By similarity) Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                         Takasaki J., Kamohara M., Saito T., Matsumoto M., Matsumoto S.,

-I- FUNCTION: Receptor for cysteinyl leukotrienes mediating construction of the microvascular smooth muscle during an inflammatory response. This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system. The rank order of affinities for the leukotrienes is LTD4.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

Isoform 1 is the most abundant form in all tested tissues. Was shown to inhibit eosinophilia, bronchial hyperreactivity and microvascula leakage Zafirlukast (Accolate) and pranlukast (Onon) were also shown to be selective antagonists.

Submitted (FEB-2003) to the EMBL/GenBank/DBJ databases.

-- FUNCTION: Receptor for cysteinyl leukortriense mediating
bronchoconstriction of individuals with and without asthma.

Stimulation by LTD4 results in the contraction and proliferation of smooth muscle, deama, eosinophil migration and damage to the mucus layer in the lung. This response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system. The rank order of affinities for the leukotrienes is LTD4

>> LTE4 = LTC4 >> LTB4.
